

Three in a row

An addition game

What you will need...

- Numicon Shapes (two of each Shape 1-5)
- 5 counters for each player

What to do...

- Put the Numicon Shapes on the table so both players can see them.
- Players take turns to look at the grid and decide which number to make.
- Pick up two Shapes to make that number, then cover it with a counter and put the two Shapes back.
- The winner is the first to cover three numbers in a row.

Note: Some children may prefer to continue until all the numerals have been covered instead of playing three in a row.
